**CALIFORNIA POPULATION TOPS 36.5 MILLION IN 2004, ADDS NEARLY 600,000
ACCORDING TO NEW STATE DEMOGRAPHIC REPORT**

FOR IMMEDIATE RELEASE:
February 7, 2005

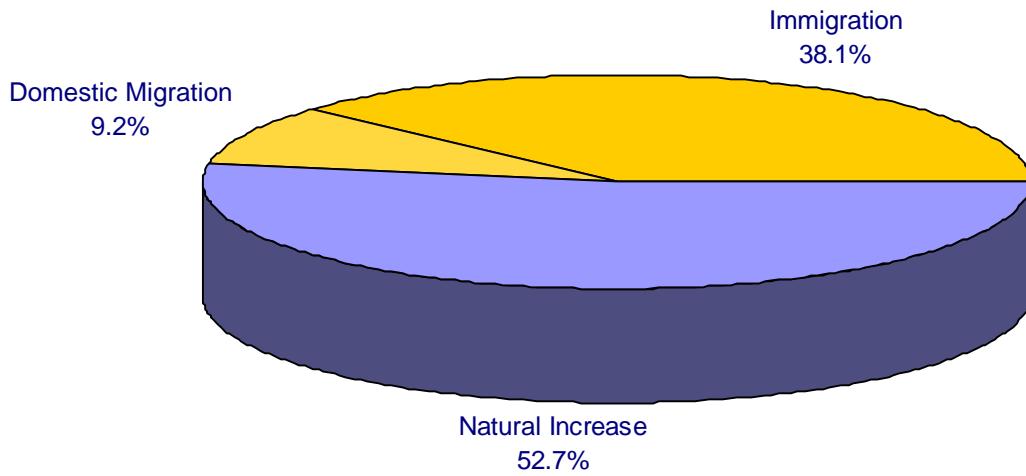

CONTACT: Linda Gage

SACRAMENTO – California's population reached 36,591,000 on July 1, 2004, according to official population estimates released today by the State Department of Finance.

The state's growth of 1.67 percent, representing over 599,000 new residents during the fiscal year, was slightly lower than growth in fiscal year 2003.

The balance of 551,000 births and 235,000 deaths resulted in a natural increase of 316,000 persons. This accounted for the majority, 52.7 percent, of the 2004 fiscal year growth. Net migration contributed 283,600 new residents, 47.3 percent. This estimate includes all legal and unauthorized foreign immigrants, residents who left the state to live abroad, and the balance of hundreds of thousands of people moving to and from California from within the United States.

Sources of Population Change in California from 2003 to 2004

- MORE -

The Department also released estimates of the sources of migration: foreign immigration and domestic migration. Net immigration, the sum of movements between California and foreign countries, contributed 228,429 persons, 38.1 percent of the overall growth. Net domestic migration, the result of movements to and from California, accounted for 55,156 new California residents that represented 9.2 percent of the growth. Highlights of the July 1, 2004 population report include:

- ❑ Los Angeles, Riverside, San Bernardino, and San Diego counties posted the highest numerical population gains and account for over half of the State's growth. Growth in Los Angeles and San Diego was due primarily to natural increase while growth in Riverside and San Bernardino was due to new residents from within the United States, including other counties in California.
- ❑ Natural Increase was the primary source of growth in the state but for only 17 counties. Eleven counties experienced natural decrease (more deaths than births during the year) – Amador, Calaveras, Inyo, Lake, Mariposa, Modoc, Nevada, Plumas, Sierra, Trinity, and Tuolumne. Eight counties had net domestic out-migration – Alameda, Marin, Monterey, San Benito, San Mateo, Santa Clara, Santa Cruz, and Sierra.
- ❑ Forty counties grew primarily from net migration. Of these, 33 counties had more domestic migration than immigration. Immigration was the primary source of migration growth in Contra Costa, Imperial, Mendocino, Merced, Napa, Sonoma, and Sutter counties.
- ❑ County population totals range from 1,289 persons in Alpine, the least populated county, to over 10.1 million in Los Angeles, the state's most populous county.
- ❑ Population change ranged from the highest growth rate of 4.45 percent in Riverside, the state's fastest growing county, to a 1.81-percent population loss in Sierra County.
- ❑ Twenty-five counties experienced a higher growth rate than the state while 33 counties grew more slowly. Sierra was the only county that experienced a modest population loss.
- ❑ Our largest counties, Los Angeles and Orange, are home to 36 percent of Californians. Another 31 percent of the state's population settled in the next six most populous counties — San Diego, San Bernardino, Riverside, Santa Clara, Alameda and Sacramento.

Population estimates are made using aggregate data from a variety of sources, including birth and death counts provided by the Department of Health Services, number of driver's licenses and driver's license address change data from the Department of Motor Vehicles, housing unit data from local governments, school enrollment data from the Department of Education, and federal income tax return data from the U.S. Internal Revenue Service. These statistical reports of administrative records do not disclose any information about individuals.

County ranking tables, maps, and the E-2 (*California County Population Estimates and Components of Change by Year, July 1, 2000-2004*) methodology and data tables are included. The E-2, and companion reports E-6 (County Population Estimates and Components of Change by County, July 1, 2000-2004) and E-7 (California Population Estimates, with Components of Change and Crude Rates, July 1, 1941-2004) is on the Department's website:

E-2. California County Population Estimates and Components of Change by Year — July 1, 2000-2004

Contents

This report presents provisional state and county population estimates for July 1, 2004; revised estimates for July 1, 2000 through July 1, 2003; and components of population change by year between fiscal years 2000-2004.

Methodology

The state and county populations are independently estimated using population change models benchmarked on official decennial census counts. The state population is estimated using the Driver License Address Change method. County population proportions are estimated using the average of three separately estimated sets of proportions. The final distribution of proportions is applied to the independently estimated state control.

State. The state population is estimated using the Driver License Address Change (DLAC) method. This composite method separately estimates three population age groups: under 18, 18 through 64, and 65 and over. The estimate of the youngest group employs a survived census cohort, births, deaths, public school enrollment in grades one through eight, and enrollment to census ratios. The estimate of the 18-64 group relies on a survived census cohort, migration estimates based on driver license address changes and federal tax return data, immigration estimates based on data from the U.S. Citizenship and Immigration Services, Office of Immigration Statistics, and death data. The estimate of the oldest group is based on changes in Medicare and Medi-Cal enrollments. Population in college dormitories, state and federal institutions, military barracks, and other group quarters are added to over 18 population groups.

Counties. County population proportions result from averaging three methods.

DLAC Method. A modified version of the State Driver License Address Change method is used for counties. County proportions of the State total result from changes in county population values for births, deaths, school enrollment, foreign and domestic migration, medical aid enrollments and group quarters population.

Ratio-Correlation Method. This method models change in household population as a function of changes in the distributions of driver licenses, school enrollments, housing units, and deaths. Estimates of county group quarters are added.

Tax Return Method. County proportions are derived by the U.S. Census Bureau using matched federal income tax returns to estimate intercounty migration along with vital statistics, group quarters and other information for the population aged 65 and over.

E-2. California County Population Estimates and Components of Change
Revised July 1, 2003 and Provisional July 1, 2004
